EDUCATION

University of North Florida

Bachelor of Science in Computer Science, Magna Cum Laude

Jacksonville, FL

Aug. 2023 – Dec. 2025

- GPA 3.66/4.0. Degree taught entirely in English.
- Honors: President's List, Dean's List, Latin American/Caribbean Scholarship, Upsilon Pi Epsilon honor society.

Georgia State University

Computer science coursework, transferred to UNF

Atlanta, GA

Jan. 2021 – Jul. 2023

EXPERIENCE

Backend Software Engineer

Feb. 2026 – Present

Grip Shipping, Inc., fulfillment software for perishable-goods brands

Remote from Colombia

- Built the bulk upload that lets clients create advance shipment notices (ASNs) from Excel or CSV, something only Grip's internal team could do before. Later added warehouse transfers and bulk edits.
- Building one backend check for ASN rules, shared by the portal form, the bulk upload and the admin tool. Invalid requests get a 400 with the reason, and nothing is saved.
- Found and fixed a bug in a SQL stored procedure that kept transfer orders from closing on their own.
- Fixed a long-standing bug that removed a bundle's component SKUs whenever the bundle was edited.
- Corrected production order and tracking data with transactional SQL after operational errors.
- Diagnosed a Shopify integration issue where a missing app permission made product lookups fail without an error.
- Review PRs and bugs with Claude Code agents, while a second set of agents tries to disprove each finding before it is checked against the code.
- Keep a ticket log that the agents write and update (26 entries, each fact marked as confirmed or still to verify) and run scheduled jobs that summarize new tickets every morning and scan error logs for failures.

Programming Assistant

Feb. 2024 – Dec. 2024

University of North Florida

Jacksonville, FL

- Helped students in a lab used by 900+ people per semester with machines, software setup and accounts, and wrote up fixes for recurring issues.

Data Analysis Intern

Aug. 2022 – Jan. 2023

SalesLand Colombia SAS

Bogotá, Colombia

- Cleaned and validated recruitment and performance data in Python and Excel, and wrote scripts to automate recurring reports.

PROJECTS

AI JobShield | *Python, scikit-learn, Streamlit*

- Flags fake job postings with TF-IDF features and logistic regression, trained on about 17,000 labeled listings.

PRism | *Python, FastAPI, PostgreSQL, Lit*

- Prototype that turns spreadsheet media-coverage reports into dashboards and presentation exports.

TECHNICAL SKILLS

Languages: Python, SQL (T-SQL), JavaScript

Backend & web: FastAPI, REST APIs, GraphQL (Shopify API), Lit, Jinja2, Django

Data & cloud: SQL Server, PostgreSQL, Redis, Databricks, pandas, Azure (App Service, Functions), GitHub Actions

AI & testing: Claude Code agents, MCP, scikit-learn, pytest, Vitest

Spoken: Spanish (native), English (professional), Portuguese (B1)
